

Login UI Project Report

Project Title

Responsive Login User Interface.

Introduction

The Login UI project focuses on designing a modern and user-friendly authentication interface using HTML and CSS.

Objective

To create an attractive login page that provides a seamless user experience while following modern UI design principles.

Technologies Used

- HTML5
- CSS3
- Visual Studio Code
- GitHub

Features

- Email input field
- Password input field
- Remember Me option
- Forgot Password link
- Sign Up navigation
- Responsive layout

Project Structure

- index.html
- style.css
- README.md

Implementation

The interface was designed using semantic HTML elements and styled using CSS. Special attention was given to typography, spacing, and usability.

Challenges Faced

- Aligning form elements
- Maintaining responsiveness
- Improving visual appeal

Learning Outcomes

- Form design principles
- CSS layout techniques
- User interface design fundamentals

Conclusion

The Login UI project demonstrates the ability to create clean, responsive, and professional authentication interfaces using front-end technologies.
